# Creating Race/Ethnicity Variables In NYTS 2004

Questions regarding race & ethnicity were asked differently in the 2004 NYTS, when compared to previous years' (2000, 2002) surveys.  This was to comply with OMB directive 15.

In 2004, respondents were first asked about their Spanish / Hispanic origin:
Are you of Spanish or Hispanic origin?                                 (QN4)
  a)  Yes
  b)  No

Respondents are then asked about race:
What race or races do you consider yourself to be?  **(Please select 1 or more than one category.)**  Would you say:
  a) American Indian or Alaska Native                              (QN5A)
  b) Asian                                                         (QN5B)
  c) Black or African American                                    (QN5C)
  d) Native Hawaiian or Other Pacific Islander                    (QN5D)
  e) White                                                        (QN5E)

Two different definitions of race/ethnicity were created.  The difference between the two definitions is when a person picks more than one race.  One definition (RACE_M) is such that if a person marks more than one race, then they are grouped as "multiple race" (consistent with OMB 15 directive).  The other definition (RACE_S) is such that even if a person marks more than one race, they are grouped into one of the 6 race/ethnic groups (this is to be able to compare to previous years).

The coding is below.

```
*race/ethnicity - sum up answers to white, black, etc to
  determine if there is > 1 race answered;
 mrace = sum(qn5a, qn5b, qn5c, qn5d, qn5e);
 label mrace="Number of races chosen from Q5";

 *hispanic ethnicity takes precedent - similar to previous NYTS datasets &
  race recoding;
 if qn4=1 then RACE_S=3;                    *hispanic;
 else if qn4=2 then do;                     *non-hispanic;
  if mrace=1 then do;                       *one-race;
   if qn5e=1 then RACE_S=1;                 *nh-white;
   else if qn5c=1 then RACE_S=2;            *nh-black;
   else if qn5b=1 then RACE_S=4;            *nh-asian;
   else if qn5a=1 then RACE_S=5;            *nh-ai/an;
   else if qn5d=1 then RACE_S=6;            *nh-nhopi;
  end;
  else if mrace > 1 then do;                *multiple races;
   *the order of these conditional statements determines race priority -
   based on previous surveys when there is more than 1 race, but the
   mainrace question was not picked;
   if qn5e=1 then RACE_S=1;                 *nh-white;
   else if qn5c=1 then RACE_S=2;            *nh-black;
   else if qn5b=1 then RACE_S=4;            *nh-asian;
   else if qn5a=1 then RACE_S=5;            *nh-ai/an;
   else if qn5d=1 then RACE_S=6;            *nh-nhopi;
```

```
 end;
end;
label RACE_S="RECODE:  Race/Eth - no mult grp";

*race/ethnicity - based on NHIS where when there is > 1 race, then put
that person in "multiple" race;
 *hispanic ethnicity takes precedent - similar to previous NYTS datasets &
 race recoding;
if qn4=1 then RACE_M=3;                        *hispanic;
else if qn4=2 then do;                         *non-hispanic;
 if mrace=1 then do;                           *one-race;
  if qn5e=1 then RACE_M=1;                      *nh-white;
   else if qn5c=1 then RACE_M=2;                *nh=black;
   else if qn5b=1 then RACE_M=4;                *nh-asian;
   else if qn5a=1 then RACE_M=5;                *nh-ai/an;
   else if qn5d=1 then RACE_M=6;                *nh-nhopi;
 end;
 else if mrace > 1 then RACE_M=7;         *multiple race;
end;
label RACE_M="RECODE:  Race/Eth - mult grp";
